

# Costs

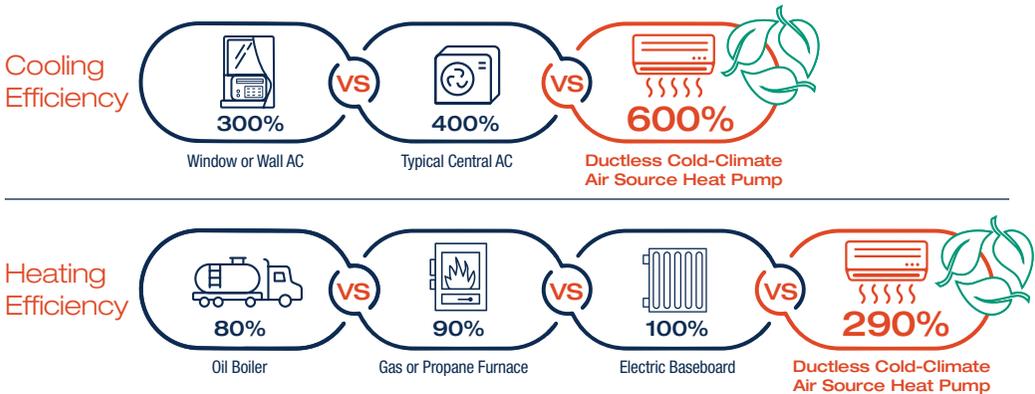

## THE COMFORT OF ALL-SEASON SAVINGS

Today's cold-climate air source heat pump systems are extremely energy efficient. When sized and configured correctly, the cost reductions customers typically experience can add up to significant savings. They're sustainable, dual-purpose, all-season systems that heat in the winter, cool in the summer and deliver money-saving comfort year-round.

### UPGRADE YOUR ENERGY EFFICIENCY

The greater the rate of heating and cooling efficiency, the more value you can realize per energy dollar spent. When it comes to energy efficiency, cold-climate air source heat pumps simply outperform other HVAC solutions.

## TYPICAL ANNUAL HEAT PUMP HEATING COSTS

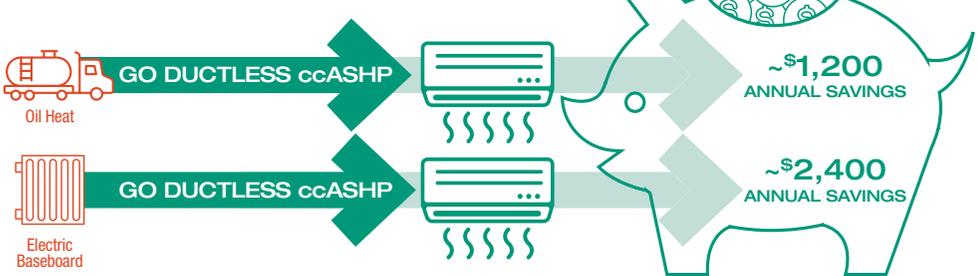

Because they operate on electricity, and don't burn combustible fuel, air source heat pumps are typically more economical to operate than other heating systems, and they are better for the environment.
